| 1(ii) | <p>Area of banner = <math>130 \times 5 = 650 \text{ cm}^2</math></p> $S_{\infty} = \frac{125}{1 - \frac{4}{5}} = 625 \text{ cm}^2 < 650 \text{ cm}^2$ <p>Therefore the boy will never finish colouring the banner.</p>                                                                                                              |  |
| 2(i)  |                                                                                                                                                                                                                                                  |  |

2(ii)

Substituting  $z = 0$  into  $|z - z_1| = |z - z_2|$ ,

$$\text{LHS} = |0 - z_1| = |z_1| = 1$$

$$\text{RHS} = |0 - z_2| = |z_2| = 1, \quad \text{LHS} = \text{RHS}$$

Since  $z = 0$  satisfies the equation  $|z - z_1| = |z - z_2|$ , the locus passes through the origin.

$$\text{Equation of locus is } y = \left[ \tan \left( \frac{\frac{\pi}{4}}{2} \right) \right] x$$

$$y = x \tan \left( \frac{\pi}{8} \right)$$
