

## 2023 C2 H1 Physics Prelim Exams Paper 1 Suggested Solutions

1	A	6	C	11	B	16	D	21	C	26	D
2	D	7	B	12	C	17	D	22	B	27	B
3	B	8	D	13	C	18	B	23	B	28	D
4	B	9	B	14	A	19	C	24	C	29	D
5	C	10	C	15	A	20	C	25	B	30	C

1	A	unit of magnetic flux density, $B = \text{unit of } (F/IL)$ $T = (\text{kg m s}^{-2}) \text{ A}^{-1} \text{ m}^{-1} = \text{kg s}^{-2} \text{ A}^{-1}$																																															
2	D	intensity $I = \text{Power } P / \text{surface area } A$ $I = \frac{P}{4\pi r^2}$ $P = 4\pi r^2 I = 4\pi (2.0)^2 (0.25) = 12.566 \text{ W}$ $\frac{\Delta P}{P} = \frac{\Delta I}{I} = +2 \frac{\Delta r}{r}$ $\frac{\Delta P}{12.566} = \frac{0.05}{0.25} + 2 \left( \frac{0.1}{2.0} \right) = 0.3$ $\Delta P = 4 \text{ W}$																																															
3	B	<table border="1"><thead><tr><th>Student</th><th colspan="5">electronic charge, <math>e / \times 10^{-19} \text{ C}</math></th><th>mean value</th><th>spread</th></tr></thead><tbody><tr><td>A</td><td>1.62</td><td>1.59</td><td>1.59</td><td>1.61</td><td>1.60</td><td>1.60</td><td>0.03</td></tr><tr><td>B</td><td>1.57</td><td>1.63</td><td>1.64</td><td>1.58</td><td>1.59</td><td>1.60</td><td>0.07</td></tr><tr><td>C</td><td>1.59</td><td>1.60</td><td>1.58</td><td>1.57</td><td>1.57</td><td>1.58</td><td>0.03</td></tr><tr><td>D</td><td>1.58</td><td>1.62</td><td>1.65</td><td>1.59</td><td>1.66</td><td>1.62</td><td>0.08</td></tr></tbody></table> <p>Student B's results have mean value = <math>1.60 \times 10^{-19} \text{ C}</math>, which are accurate. However, his results have the largest spread (random errors), thus are least precise.</p>								Student	electronic charge, $e / \times 10^{-19} \text{ C}$					mean value	spread	A	1.62	1.59	1.59	1.61	1.60	1.60	0.03	B	1.57	1.63	1.64	1.58	1.59	1.60	0.07	C	1.59	1.60	1.58	1.57	1.57	1.58	0.03	D	1.58	1.62	1.65	1.59	1.66	1.62	0.08
Student	electronic charge, $e / \times 10^{-19} \text{ C}$					mean value	spread																																										
A	1.62	1.59	1.59	1.61	1.60	1.60	0.03																																										
B	1.57	1.63	1.64	1.58	1.59	1.60	0.07																																										
C	1.59	1.60	1.58	1.57	1.57	1.58	0.03																																										
D	1.58	1.62	1.65	1.59	1.66	1.62	0.08																																										
4	B	Total displacement by car = $[(10)(3.0)] + [-(5)(6.0)] = 0 \text{ m}$ Average velocity of toy car = $\frac{\text{total displacement}}{\text{total time taken}} = \frac{0}{15} = 0 \text{ m s}^{-1}$																																															
5	C	Sketch the $v$ - $t$ graph for train. Let $t_{\text{stations}}$ be the time taken by the train to travel between the two stations. Total distance travel by train between the two stations = 3000 m $[(0.5(20)(100))]+[(20)(t_{\text{stations}} - 150)]+[(0.5)(20)(50)] = 3000$ $t_{\text{stations}} = 225 \text{ s} = 230 \text{ s (2 s.f.)}$																																															
6	C	The speed of the projectile is the magnitude of the resultant velocity of the horizontal and vertical components velocities. As the projectile rises to the highest point, its speed decreases. As the projectile falls from the highest point, its speed increases. At the highest point, the speed is not zero as the projectile still has horizontal component velocity.																																															

7	B	<p>The acceleration is downwards as the lift is ascending (i.e. velocity vector is upwards). Thus resultant force is downwards.</p> <p>The magnitude of the force exerted on the block by the floor (upwards) is always less than the magnitude of his weight (downwards).</p>
8	D	<p>Constant force <math>F = ma</math>, thus acceleration is constant.</p> <p>Using equation of motion, <math>v^2 = u^2 + 2as</math></p> <p>Since it starts from rest, <math>u = 0</math>, <math>v = \sqrt{2ad}</math></p> <p>Momentum <math>p = mv = m\sqrt{2ad}</math></p> <p>Thus <math>p</math> is directly proportional to the square root of <math>d</math>.</p>
9	B	<p>Let cross-sectional area of the stream of water be <math>A</math>,</p> <p>Rate of mass of water hitting wall <math>= 1000 \times 8.0 \times A = 8000A</math> kg</p> $F = \frac{\Delta p}{\Delta t} = \frac{\Delta m(v_f - v_i)}{\Delta t} = 8000A(0 - 8.0) = -64000A \text{ N}$ $\text{Pressure, } P = \frac{F}{A} = \frac{64000A}{A} = 64000 \text{ Pa} = 64 \text{ kPa}$
10	C	<p>Redrawing the forces into a vector triangle</p>  <p>Recognize it is a 6-8-10 right-angled triangle. (similar to a 3-4-5).</p> <p>Analysing the horizontal components in equilibrium:</p> $6.0 \cos \theta_1 = 8.0 \cos \theta_2 \Rightarrow \theta_1 < \theta_2$ <p>Thus, <math>W_1 = 6.0 \text{ N}</math>, <math>W_2 = 8.0 \text{ N}</math></p>
11	B	<p>Taking the pivot at the edge of table,</p> <p>Sum of clockwise moments = Sum of anti-clockwise moments</p> $W(1.2) = 0.43(3.6)$ $W = 1.29$ $m = \frac{W}{9.81} = 0.13 \text{ kg}$
12	C	<p>For X: resultant force = 0 and net clockwise moments</p> <p>For Y: resultant force = 0 and net clockwise moments</p> <p>For Z: net resultant force and zero net moments.</p>

13	C	<p>The increase in gravitational potential energy is <math>\Delta GPE = (2.0 \text{ N}) (0.80 \text{ m}) = 1.6 \text{ J}</math>.</p> <p>The power output is <math>P_{\text{out}} = (1.6 \text{ J}) / (4.0 \text{ s}) = 0.40 \text{ W}</math>.</p> <p>The electrical power supplied to the motor is thus <math>P_{\text{in}} = (0.40) / (0.20) = 2.0 \text{ W}</math></p>
14	A	<p>The loss in gravitational potential energy is <math>mgh = (50) (9.81) (5.00) = 2450 \text{ J}</math>.</p> <p>The final kinetic energy is <math>\frac{1}{2}mv^2 = 0.5 (50) (4.90)^2 = 600 \text{ J}</math>.</p> <p>The loss in energy is <math>2450 - 600 = 1850 \text{ J}</math>.</p> <p>Hence, the resistive force is <math>(1850) / (10.0) = 185 \text{ N}</math></p>
15	A	<p><math display="block">\text{power} = \frac{\text{work done}}{\text{time}} = \frac{\text{force} \times \text{displacement in the direction of the force}}{\text{time}}</math></p> <p>Hence, power = force <math>\times</math> <math>\frac{\text{displacement in the direction of the force}}{\text{time}}</math> = force <math>\times</math> velocity.</p> <p>Thus, the equation force = mass <math>\times</math> acceleration is not used</p>
16	D	<p><math display="block">\text{angular speed} = \frac{\text{angular displacement}}{\text{time taken}} = \frac{2\pi}{T} = \frac{2\pi \text{ rad}}{(24 \times 3600 \text{ s})} = 7.3 \times 10^{-5} \text{ rad s}^{-1}</math></p>
17	D	<p><math>v = r\omega</math>, so <math>r = v/\omega</math>.</p> <p><math>\omega = 2\pi/T</math>, so <math>T = 2\pi/\omega</math>.</p> <p><math>a = v^2/r = \omega^2 r = (\omega^2) (v/\omega) = v\omega</math></p>
18	B	<p>The gravitational force between Io and Jupiter provides the required centripetal force on Io.</p> $F_g = F_c$ $G \frac{Mm}{r^2} = m\omega^2 r = m \left( \frac{2\pi}{T} \right)^2 r$ $M = \frac{4\pi^2}{T^2} \frac{r^3}{G} = \frac{4\pi^2}{(1.77 \times 24 \times 3600)^2} \frac{(4.22 \times 10^8)^3}{(6.67 \times 10^{-11})} = 1.9 \times 10^{27} \text{ kg}$
19	C	 <p>Smallest resistance, <math>R \rightarrow</math> largest <math>I/V</math> (as <math>R = V/I</math>, definition of resistance)</p> <p>The reciprocal of the gradient of the straight line that joins the origin to the point on the <math>I</math>-<math>V</math> graph is equal to the resistance of the liquid.</p>

20	C	<p>Resistance <math>X = 10^2 / 100 = 1.0 \, \Omega</math></p> <p>Resistance <math>Y = 10^2 / 50 = 2.0 \, \Omega</math></p> <p>When in series, current through them <math>= 20.0 / 3.0 \, \text{A}</math></p> <p>Power dissipated in <math>X = (20/3)^2 (1.0) = 44.4 \, \text{W}</math></p> <p>Power dissipated in <math>Y = (20/3)^2 (2.0) = 89 \, \text{W}</math></p>
21	C	<p>Initially, when distance <math>x</math> (less than mid-way of OZ from O) increases, with a small change in distance <math>x</math>, the cross-sectional area increases, resulting in smaller increases in <math>R</math>. Later, when distance <math>x</math> (more than mid-way of OZ from O) increases, with a small change in distance <math>x</math>, the cross-sectional area decreases, resulting in larger increases in <math>R</math>.</p>
22	B	<p>The resistor across CD can be ignored as no current will flow across CD when a voltage source is connected across AB.</p> <p>Thus the effective resistance across AB is (two <math>6.0\Omega</math> resistors in series) parallel to (two <math>6.0\Omega</math> resistors in series) parallel to (one <math>6.0\Omega</math> resistor), i.e. equivalent resistance of <math>3.0 \, \Omega</math>.</p>
23	B	<p>When temperature of the thermistor increases, its resistance drops and the current through it increases.</p> <p>Thus, the p.d. across J and K increases.</p> <p>The p.d. across L and M increases, implying that the p.d across J and L decreases.</p>
24	C	<p>For a full-scale deflection, the current through A is <math>10 \, \text{mA}</math> and p.d. is <math>100 \, \text{mV}</math>. Thus, if a circuit has a current of <math>100 \, \text{mA}</math>, the current through R is <math>(100 - 10) = 90 \, \text{mA}</math>.</p> <p>Since p.d. across <math>10 \, \Omega</math>, and R are the same</p> $0.100 = (0.090)R$ $R_{\square} = 1.1 \, \Omega$
25	B	<p>Moment</p> $\tau = r \times F = (r)(BIL)$ $7.2 \times 10^{-3} = (0.250)(B \times 1.60 \times 0.091)$ $B = 0.1978 \approx 0.198 \, \text{T}$ <p>Direction – along x direction</p>
26	D	<p>Electric force on P, <math>F = qE = (2)(1.6 \times 10^{-19})(1.5 \times 10^5) = 4.8 \times 10^{-14} \, \text{N}</math></p> <p>Toque <math>\tau = r \times F = (4.0 \times 10^{-12})(\sin 55^\circ)(4.8 \times 10^{-14}) = 1.6 \times 10^{-25} \, \text{Nm}</math></p> <p>The direction of torque is anti-clockwise.</p>

27	B	<p>Magnetic force provides required centripetal force</p> $Bev = \frac{mv^2}{r}$ $r = \frac{mv}{Be}$
28	D	<p>Back scattering and large angle scattering is due to the positive charge in the gold nucleus. Since the charge of the nucleus is constant, the scattering will not change. Thus A, B &amp; C is incorrect.</p>
29	D	<p>Fusion or fission will only result in products with higher binding energy per nucleon so that energy can be released in the process.</p>
30	C	$\frac{1}{2^n} = \frac{2}{64} = \frac{1}{32} = \frac{1}{2^5}$ <p> <math>\Rightarrow</math> The radioactive isotopes have undergone 5 half-lives in 60 min.  <math>\Rightarrow</math> Half-life = <math>60/5 = 12</math> min.         </p>
