#### PRELIMINARY EXAMINATION 2024 SECONDARY FOUR EXPRESS / FIVE NORMAL (ACADEMIC)

#### ADDITIONAL MATHEMATICS 4049 PAPER 2

## 2 HOURS 15 MINUTES

Candidates answer on the Question Paper.

### **READ THESE INSTRUCTIONS FIRST**

Write your index number and name in the spaces at the top of this page. Write in dark blue or black pen. You may use an HB pencil for any diagrams or graphs.

Answer all questions.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question. The use of an approved scientific calculator is expected, where appropriate. You are reminded of the need for clear presentation in your answers.

The number of marks is given in brackets [] at the end of each question or part question.

The total number of marks for this paper is 90.

For Examiner's Use

This document consists of **19** printed pages and **1** blank page.

#### Mathematical Formulae

#### 1. ALGEBRA

Quadratic Equation

For the equation  $ax^2 + bx + c = 0$ ,

$$x = \frac{-b \pm \sqrt{b^2 - 4ac}}{2a}$$

**Binomial** expansion

$$(a+b)^{n} = a^{n} + \binom{n}{1}a^{n-1}b + \binom{n}{2}a^{n-2}b^{2} + \dots + \binom{n}{r}a^{n-r}b^{r} + \dots + b^{n},$$

where *n* is a positive integer and  $\binom{n}{r} = \frac{n!}{r!(n-r)!} = \frac{n(n-1)\dots(n-r+1)}{r!}$ 

#### 2. TRIGONOMETRY

Identities

$$\sin^2 A + \cos^2 A = 1$$
$$\sec^2 A = 1 + \tan^2 A$$
$$\csc^2 A = 1 + \cot^2 A$$

 $\sin(A\pm B) = \sin A \cos B \pm \cos A \sin B$ 

$$\cos(A\pm B) = \cos A \cos B \mp \sin A \sin B$$

$$\tan\left(A\pm B\right) = \frac{\tan A \pm \tan B}{1\mp \tan A \tan B}$$

$$\sin 2A = 2\sin A\cos A$$

$$\cos 2A = \cos^{2} A - \sin^{2} A = 2\cos^{2} A - 1 = 1 - 2\sin^{2} A$$
$$\tan 2A = \frac{2\tan A}{2}$$

$$\tan 2A = \frac{1}{1 - \tan^2 A}$$

Formulae for  $\triangle ABC$ 

$$\frac{a}{\sin A} = \frac{b}{\sin B} = \frac{c}{\sin C}$$
$$a^{2} = b^{2} + c^{2} - 2bc \cos A$$
$$\Delta = \frac{1}{2}bc \sin A$$

[5]

1 A particle moves along the curve  $y = \frac{3(x+6)}{x+4}$ , where  $x \neq -4$ , in such a way that the ycoordinate of the particle is increasing at a constant rate of  $\frac{4}{27}$  units per second. Find the x-coordinates of the particle at the instant that the x-coordinate of the particle is decreasing at a rate of 2 units per second.

[4]

2 The number, v, of a certain virus present in a sample collected by a vaccine laboratory is given by v = me<sup>2t</sup> + n, where m and n are constants and t is measured in days. Initially, the number of virus present was 2000. It increased to 5000 after 1 day.
(a) Find the value of m and of n.

(b) Find the number of days in which the number of virus present first reach [2] 1 million.

3 (a) Show that the roots of the equation  $ax^2 + (3a+b)x + 3b = 0$  are real for all real values of *a* and *b*. [3]

(b) Find the range of values of *m* for which the line y = mx - 3 will never cut the curve  $y^2 = 4x - 6y - 34$ . [4]

4 A tangent to a circle at the point (6, 10) passes through the point (9, 6). The centre of the circle lies on the line 3y = 4x + 13. Showing all your working, find the equation of the circle. [7]

## 5 Do not use a calculator in this question.

(a) Express sin 22.5° in the form of  $\frac{\sqrt{a-\sqrt{a}}}{a}$ , where *a* is an integer. [3]

(b) Show that  $\tan 15^\circ = 2 - \sqrt{3}$ .

[5]

[1]

6 (a) (i) Using the substitution  $u = x^3$  or otherwise, express  $x^6 - 1$  as the product of two factors. [1]

(ii) Hence express  $x^6 - 1$  as the product of four factors with integer coefficients.

# 6 (b) (i) Find the remainder when $f(x) = 3x^3 - 5x^2 + 7x - 4$ is divided by x - 1. [1]

(ii) Hence show that 
$$h = -1$$
 for which  $g(x) = f(x) + h$  is divisible by  $x - 1$ . [2]

(iii) Explain why the equation g(x) = 0 has only one real root. [4]

7 (a) Two variables x and y are related by the equation  $xy^2 = ax + by$ . Explain how a straight line graph can be drawn to represent the given equation. [2]

(b) The table shows experimental values of two variables x and y. It is known that x and y are related by the equation  $y = pe^{-qx}$  where p and q are constants.

x	1	3	5	7	9
у	98.2	65.9	44.1	29.6	19.8

(i) On the grid below plot  $\ln y$  against x and draw a straight line graph. [2]

- 7 (b) (ii) Use your graph to estimate
  - (a) the value of p and of q,

[3]

(**b**) the value of *y* when x = 2.

[1]

8 *ABCD* is a rectangle which fits inside a semicircle of radius 8 cm and centre *O*. It is given that AB = x cm and BC = y cm.

(a) Show that that A cm<sup>2</sup>, the area of the rectangle, is given by  $A = \frac{x}{2}\sqrt{256 - x^2}$ . [2]

8 (b) Given that x can vary, find the value of x which gives a stationary value of A. [4]

(c) By considering the sign of  $\frac{dA}{dx}$ , determine whether the stationary value of A is maximum or minimum. [2]

[3]

- 9 A particle starts from rest from a point O and moves in a straight line such that its velocity v m/s, is given by  $v = 24t 6t^2$ , where t is the time in seconds after the start of its motion.
  - (a) Find the value of t at which the particle is instantaneously at rest. [2]

(b) When will the particle return to its starting point?

9 (c) Determine if the particle is accelerating after 2 seconds. Explain your answer with clear workings.

[3]

(d) Calculate the total distance travelled during the first 7 seconds. [4]

[2]

The diagram shows the side view of a 14 cm by 8 cm rectangular block *PQRS*, placed on a ramp, *VS*, tilted at an acute angle of  $\theta^{\circ}$ .

The ramp is placed on a horizontal surface ST and d is the perpendicular distance from Q to ST.  $\angle VTS = 90^{\circ}$ .

(a) Show that  $d = 8\cos\theta + 14\sin\theta$ .

(b) Express d in the form  $R\cos(\theta - \alpha)$ , where R > 0 and  $0^{\circ} < \alpha < 90^{\circ}$ . [4]

10

10 (c) Find the smallest value of  $\theta$  such that  $d = 10\sqrt{2}$ .

[4]

11 The diagram shows part of the curve  $y = \frac{8}{2x+3}$ . The tangent to the curve at the point  $S\left(\frac{3}{2}, \frac{4}{3}\right)$  intersects the *y*-axis at *R*.

(a) Find the *y*-coordinate of *R*.

[4]

11 (b) Find the exact area of the shaded region. Express your answer in the form of  $\left(\ln a - \frac{b}{c}\right)$  units<sup>2</sup>, where *a*, *b* and *c* are integers. [6]
